

Dot & Key Blueberry Hydrate & Barrier Repair Sunscreen SPF 50+ PA++++

Hydrating • Barrier Support • High UVA/UVB Protection • Lightweight

SKINWISE QUICK TAGS

Normal Skin • Dry Skin • Normal-to-Dry • Combination • Dehydrated Skin • SPF 50+ • PA++++

WHY SKINWISE SELECTED IT

A hydrating sunscreen that combines SPF 50+ PA++++ protection with barrier-supporting ingredients.

Unlike a purely sun-protection-focused formula, this product includes **ceramides, cholesterol, phospholipids, hyaluronic acid and soothing ingredients**, making it particularly interesting for customers who want **sun protection + hydration + barrier support**.

BEST FOR

Particularly suitable for:

- ✓ Normal skin
- ✓ Normal-to-dry skin
- ✓ Dry skin
- ✓ Dehydrated skin
- ✓ Combination skin
- ✓ Skin with a compromised/dry-feeling barrier
- ✓ People who dislike very matte sunscreens
- ✓ Daily sunscreen users

MAY NOT BE THE FIRST CHOICE FOR

- Very oily skin with significant shine
 - People specifically looking for **maximum oil control**
 - People who prefer an ultra-light watery sunscreen
 - Someone wanting a **tinted sunscreen for pigmentation/visible-light protection**
-

SUN PROTECTION

SPF: 50+

UVA: PA++++

Protection: UVA + UVB

The product is marketed as **in-vivo tested SPF 50+ PA++++**.

Skinwise interpretation

UVB protection: ★★★★★

UVA protection: ★★★★★

However, I would **not market this as a visible-light sunscreen** unless the specific product documentation explicitly supports that claim. For pigmentation/melasma patients, a suitable **tinted sunscreen containing iron oxides** can have an additional advantage against visible light. The AAD specifically notes tinted sunscreens with iron oxide for visible-light protection.

KEY INGREDIENTS

Hyaluronic Acid + Glycerin

Humectants that help attract and retain water, supporting skin hydration.

Ceramides

Skin-identical lipids that are important components of the skin barrier and help support barrier function.

Cholesterol + Phospholipids

These are important components of the skin's lipid barrier and complement the ceramides in the formulation.

Blueberry Extract

Provides antioxidant/soothing positioning within the formula.

Palmitoyl Tripeptide-1 + Palmitoyl Tetrapeptide-7

Peptides included for skin-conditioning/anti-ageing positioning. I would **not make strong anti-wrinkle claims** for these ingredients on the Skinwise product page without product-specific clinical evidence.

Allantoin

A soothing skin-conditioning ingredient.

Tocopheryl Acetate

Vitamin E derivative with antioxidant properties.

TEXTURE & FINISH

Texture: Lightweight cream/lotion

Finish: Hydrating, comfortable

Feel: Moisturising but designed to be non-greasy

White cast: Designed as a no-white-cast sunscreen

Fragrance: Fragrance-free according to the published ingredient information.

SKINWISE SUITABILITY

Skin Type	Suitability
Normal-to-Dry	★★★★★
Dry	★★★★★
Normal	★★★★★
Dehydrated	★★★★★
Combination	★★★★☆
Sensitive	★★★★☆
Normal-to-Oily	★★★★☆
Oily	★★★☆☆
Very Oily	★★☆☆☆
Acne-Prone	★★★★☆

 **SKINWISE PRIMARY CATEGORY**

SUNSCREEN → HYDRATING / BARRIER SUPPORT

PROS

- + SPF 50+
- + PA++++
- + Hydrating formulation
- + Ceramides + cholesterol + phospholipids
- + Hyaluronic acid
- + Contains antioxidant/soothing ingredients
- + Fragrance-free according to published ingredient information
- + Alcohol-free according to the published ingredient analysis

- + Good option for dry/dehydrated skin
 - + Non-comedogenic positioning
-

THINGS TO KNOW

- Not designed primarily for strong oil control
 - May feel more moisturising than an oil-control sunscreen on very oily skin
 - Not a tinted sunscreen, so don't position it as a visible-light/pigmentation sunscreen
 - “**Barrier repair**” should be communicated carefully: the formula contains barrier-supporting ingredients, but sunscreen itself should not be presented as a medical treatment for a damaged skin barrier.
-

HOW TO USE

Apply generously and evenly to the **face and neck as the last step of your morning skincare routine**, before sun exposure.

When outdoors, reapply approximately every **2 hours**, and after swimming or sweating. General dermatology guidance recommends broad-spectrum SPF 30+ and water resistance, with reapplication during outdoor exposure.

DERMATOLOGIST'S PICK

Best suited for

Normal → Normal-to-Dry → Dry → Dehydrated → Combination skin

Especially when:

The patient wants sunscreen with a more hydrating, barrier-supportive feel rather than a dry, highly mattifying finish.

Not my first choice when:

The main problem is very oily skin and the patient wants maximum shine/oil control.

SKINWISE VERDICT

4.4 / 5

 **Best feature**

 Hydration + barrier-supportive ingredients + SPF 50+ PA++++

One-line recommendation

A hydrating SPF 50+ PA++++ sunscreen with ceramides, cholesterol and hyaluronic acid, making it a good everyday option for normal-to-dry, dehydrated and combination skin.
