

SOLASAFE ACE LIQUID SUNSCREEN SPF 50+ PA+++

Positioning: Lightweight fluid sunscreen with hydration + oil-control/skin-support ingredients.

This is actually the **most interesting Solasafe product for your Skinwise catalogue.**

SKINWISE QUICK TAGS

SPF 50+ • PA+++ • Lightweight Fluid • Acne-Prone • Niacinamide • Zinc PCA • Hydrating • Fragrance-Free

Available product information describes it as a lightweight, water-based liquid sunscreen with **SPF 50+ PA+++**, and lists it as fragrance-free and non-comedogenic.

★ WHY SKINWISE SELECTED IT

Unlike the traditional Solasafe silicone gel, ACE combines **photoprotection with skincare-oriented ingredients.**

The interesting combination is:

Niacinamide + Zinc PCA + Hyaluronic Acid + Cica + Green Tea

That makes it particularly attractive for customers who want a sunscreen that doesn't feel like a separate heavy step.

BEST FOR

- **Oily skin**
- **Combination skin**
- **Acne-prone skin**
- Normal-to-oily skin
- Customers who dislike heavy sunscreen
- Customers looking for a lightweight fluid

MAY NOT BE THE FIRST CHOICE FOR

- Extremely dry skin needing a richer sunscreen
- Customers wanting **tinted/visible-light protection**
- Customers specifically wanting PA++++

SUN PROTECTION

SPF 50+ / PA+++

The product is marketed for protection against:

- UVA
- UVB
- Infrared
- Blue light

It also uses an **InfraGuard®** technology marketed for environmental/infrared/blue-light protection.

I would present these as **manufacturer/product claims**, rather than implying that blue-light/IR protection is equivalent to conventional SPF/UVA testing.

KEY INGREDIENTS

Niacinamide

→ Supports skin barrier and can help with uneven pigmentation.

Zinc PCA

→ Useful ingredient for oily/acne-prone skin because of its sebum-regulating positioning.

Hyaluronic Acid / Hyaclear 7

→ Hydration.

Centella Asiatica (Cica)

→ Soothing/barrier-support ingredient.

Green Tea Extract

→ Antioxidant support.

Squalane

→ Emollient/hydration support.

The published product information specifically lists these ingredients/technologies.

✨ **TEXTURE & FINISH**

Very lightweight liquid → fast spreading → non-greasy → invisible finish

This is where ACE has a significant advantage over the conventional Solasafe silicone gel.

SKINWISE SUITABILITY

Skin Type	Suitability
Oily	★★★★★
Combination	★★★★★
Normal	★★★★★
Normal-to-Dry	★★★★
Dry	★★★★
Sensitive	★★★★
Acne-prone	★★★★★

PROS

- SPF 50+
- Lightweight fluid
- PA+++
- Niacinamide
- Zinc PCA
- Hyaluronic acid
- Cica + green tea
- Fragrance-free
- Non-comedogenic claim
- Particularly attractive for oily/acne-prone users
- Hydrating without a heavy cream feel

THINGS TO KNOW

- PA+++ rather than PA++++.
- Not tinted.
- For pigmentation/melasma patients specifically concerned about visible light, I'd prefer a **properly tinted sunscreen**.
- Don't market the niacinamide/Zinc PCA as an acne treatment; they are supportive skincare ingredients.

DERMATOLOGIST'S PICK

Probably the strongest Solasafe choice for your Skinwise catalogue if you want one product targeting the modern “oily + acne-prone + lightweight sunscreen” customer.

SKINWISE VERDICT

4.5 / 5
